

### **In the Specification**

***On page 1, please replace the second paragraph with the following:***

With good heat resistance, polyimides have many applications for heat insulation, for example, for heat-insulating films for parts of electronic appliances, for heat-resistant parts of electric appliances, etc. At present, however, polyimides could not be formed into thin-walled moldings or large-sized moldings on an industrial scale, as their workability ~~are~~ is poor.
